

### Typical Connection Scheme Diagram

LED Explanation	Flashing per 1 sec		
	Flashing per 2 sec		
	Flashing per 4 sec		
<span style="color: green;">●</span>	WiFi Connected AC connected	WiFi Connected Inverter Standby	WiFi Connected Inverter Working
<span style="color: red;">●</span>	WiFi not connected AC disconnected	Inverter Alert	Inverter Alert
<span style="color: orange;">●</span>	WiFi not connected AC connected	WiFi not connected Inverter standby	WiFi not connected Inverter working

### Before setting up WIFI

#### DO NOT CONNECT INVERTER AC TO SOCKET

i

An eight-digit string can be found under the barcode on the sticker

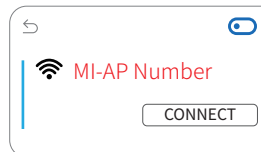

This is the **AP Number**

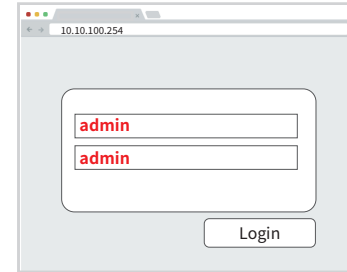

1

From a PC (MAC/WINDOWS) or a smart phone find such Wifi Hotspot in your Wifi list  
Connect the Hotspot with password:

**12345678**

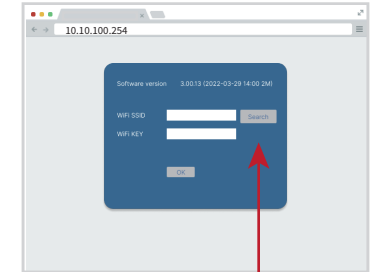

2

Visit such address in your web browser

**10.10.100.254**

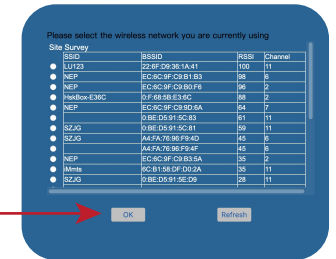

Click on "Search" to select from WiFi list or type in SSID & Password manually

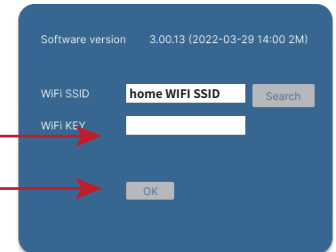

Be aware: only use 2.4GHz WiFi

3

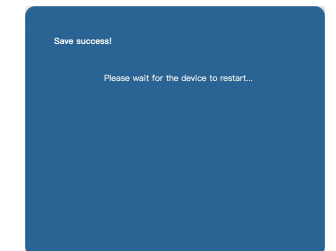

Select your **home WIFI SSID** and click on **OK**

Enter WIFI password and click on **OK**

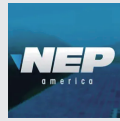

Plug inverter AC into wall socket, WiFi is connected.  
Data will start uploading to cloud after **20 minutes**

## Obtain **NEPViewer** App

Search for NEPViewer in App Store or Google Play  
\* Android users can visit [user.nepviewer.com](http://user.nepviewer.com) for latest version APK file

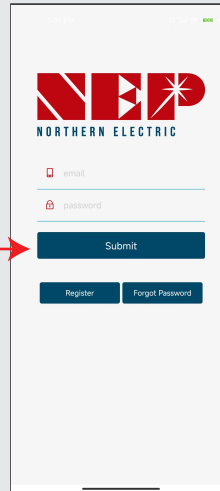

## QUICK INSTALLATION GUIDE

### NEPViewer Configuration

Open  
NEPViewer

Login or Register

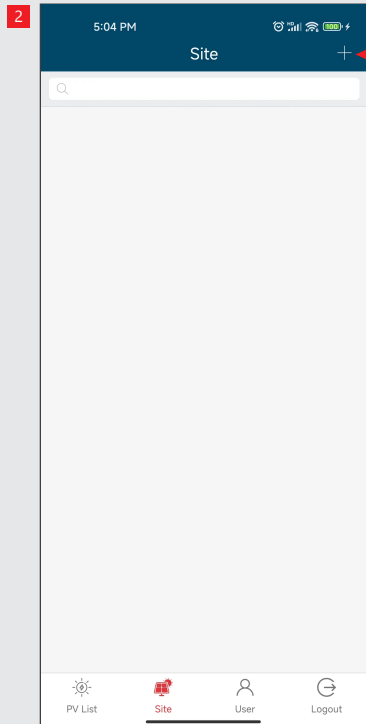

In the red box shown left, Gateway (PLC) or WiFi, can be added in the form of **GATEWAY CODE**

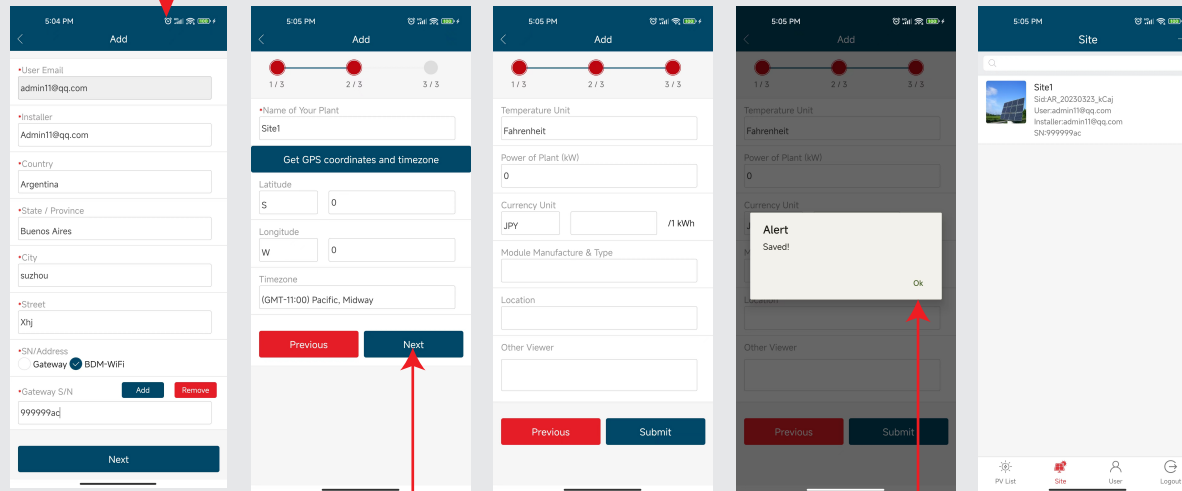

On label of the inverter, a serial number can be found under the bar code, in form of:

XXXXX-XXXXXXX-X

This EIGHT-digit-code is the **GATEWAY CODE**
